

▶ 光触媒系列产品简介

贝森环保光触媒系列产品为公司主要核心优势产品之一；产品外表美观、结构强度好、废气处理性能行业优先；产品选用优质纳米级二氧化钛作为基础材料，通过贝森环保独特配方调制，实现产品性能行业领先；产品采用：铝蜂窝芯、海绵、铝箔网、发泡陶瓷、发泡金属等材料为载体，采用铝型材、黑卡纸(或其他颜色纸张)、海绵条、不锈钢等材料为产品封边材料，实现在不同使用场景的最佳使用效果；

贝森环保通过对配方、载体等的严格控制与要求，实现公司光触媒系列产品实现高效的光氧催化作用，极大的提高了甲醛、tvocs 气体的处理效率，最大可能适应各种工况条件的产品使用。

Besin environmental photocatalyst series products are one of the company's main core products;The product appearance is beautiful, the structure strength is good, the exhaust gas treatment performance industry is preferred;The product selects high-quality nanometer titanium dioxide as the base material, and achieves the leading performance in the industry through the unique formulation of besin environmental protection.Products: aluminum honeycomb core, sponge, aluminum foil mesh, foamed ceramics, foamed metal and other materials as the carrier, using aluminum profile, black card paper (or other color paper), sponge strip, stainless steel and other materials as the product edge sealing materials, to achieve the best use in different scenarios;

Through strict control and requirements on formula, carrier, etc., besin environmental protection achieves efficient photooxygen catalysis of the company's photocatalyst series of products, which greatly improves the processing efficiency of formaldehyde and tvocs gas, and maximally ADAPTS to the use of products under various working conditions.
